

## Cable TV

Sit back. Relax. And enjoy the show.

*Featuring HD Channels*

Welcome to cable TV here at Purchase! Before you get started watching full HD programming, you'll need to have a QAM tuner (internal or external), and a coaxial cable for your TV.

To determine whether your TV has an internal tuner you'll need to search the specifications section of your TV manual or locate the make and model of the TV and lookup the specs online. If your TV doesn't have an internal QAM tuner, you'll need to buy an external QAM tuner to receive channels.

## Troubleshooting

Before you contact Apogee's support for issues with your cable, please make sure to do the following:

- Connect your coaxial cable from the wall to the TV.
- Turn on the TV and press **SETUP** or **MENU**.
- Set the TV input to cable TV/CATV.
- Go back to the main menu and find **AUTOSCAN**, **AUTOPROGRAM**, or **CHANNEL SCAN**.
- The TV should now be scanning all available channels.

After the scan is complete, you should have all your channels. If you still have questions, please utilize the support information provided below.
