To Parents and Guardians of Students **under** Eighteen:

In order to procure quickly any emergency care that may be necessary for students and at the same time to protect the health care providers and institutions involved, it is required that you sign and have witnessed the consent for emergency treatment below.

Be assured that we make every effort to notify parents at once in case of serious accidents or illnesses when these come to our attention.

I_____ pursuant to the authority vested in me as

parent-quardian

_____ of _____ do hereby authorize the ______

medical staff of Purchase College Student Health Service upon consultation with a practicing physician, nurse practitioner or surgeon to exercise for me and on my behalf, all rights and duties with reference to consenting to appropriate medical, psychiatric, and surgical treatment, anesthetics, medicines and hospitalization, including care and treatment, by any hospital, or licensed health care provider for the emergency care of my child,

Part I: Tuberculosis (TB) Screening Questionnaire (to be completed by incoming students)

Please answer the following questions:

Have you ever had close contact with persons known or suspected to have active TB disease? 🗋 Yes

Were you born in one of the countries or territories listed below that have a high incidence of active TB disease? (If yes, please CIRCLE the country, below.) \Box Yes \Box No

Afghanistan Algeria Angola Anguilla Argentina Armenia Azerbaijan Bangladesh Belarus Belize Benin Bhutan Bolivia (Plurinational State of) Bosnia and Herzegovina Botswana Brazil Brunei Darussalam Burkina Faso Burundi Cabo Verde Cambodia Cameroon Central African Republic Chad China China, Hong Kong SAR China, Macao SAR Colombia Comoros Congo Congo (Democratic Republic of) Cote d'Ivoire Diibouti **Dominican Republic** Ecuador El Salvador Equatorial Guinea Eritrea Eswatini Ethiopia Fiji Gabon Gambia

Georgia Ghana Greenland Guam Guatemala Guinea Guinea-Bissau Guyana Haiti Honduras India Indonesia Iraq Kazakhstan Kenya Kiribati Korea (Democratic People's Republic of) Korea (Republic of) Kyrgyzstan Lao People's Democratic Republic Lesotho Liberia Libva Lithuania Madagascar Malawi Malaysia Maldives Mali Marshall Islands Mauritania Mexico Micronesia (Federated States of) Moldova (Republic of) Mongolia Morocco Mozambique Myanmar Namibia Nauru Nepal Nicaragua Niger Nigeria

Niue Northern Mariana Islands Pakistan Palau Panama Papua New Guinea Paraguay Peru Philippines Oatar Romania **Russian Federation** Rwanda Sao Tome and Principe Senegal Sierra Leone Singapore Solomon Islands Somalia South Africa South Sudan Sri Lanka Sudan Suriname Tajikistan Tanzania (United Republic of) Thailand Timor-Leste Togo Tunisia Turkmenistan Tuvalu Uganda Ukraine Uruguay Uzbekistan Vanuatu Venezuela (Bolivarian Republic of) Viet Nam Yemen Zambia Zimbabwe

No

Source: World Health Organization Global Health Observatory, Tuberculosis Incidence. Countries with average incidence rates of ≥ 20 cases per 100,000 population.

Have you resided in or traveled to one or more of the countries or territories listed above for a cumulative period of one to three months or more? (If yes, CHECK the countries or territories, above)	⊔ Yes	U No
Have you been a resident, volunteer, and/or employee of high-risk congregate settings (e.g., correctional facilities, long-term care facilities, and homeless shelters)?	□ Yes	🗆 No
Have you been a volunteer or health care worker who served clients who are at increased risk for active TB disease?	U Yes	🗆 No
Have you ever been a member of any of the following groups that may have an increased incidence of latent <i>M. tuberculosis</i> infection or active TB disease: medically underserved, low-income, or using drugs or alcohol?	□ Yes	🗆 No

If you answered YES to any of the above questions, Purchase College recommends that you receive TB testing prior to the start of your first enrolled term). The significance of any travel exposure should be reviewed with a health care provider.

If the answer to all the above questions is NO, no further testing or further action is required.

Part II. Clinical Assessment by Health Care Provider

Clinicians should review and verify the information in Part I. Persons answering YES to any of the questions in Part I are candidates for either Mantoux tuberculin skin test (TST) or Interferon Gamma Release Assay (IGRA) unless a previous positive test has been documented.

History of a positive TB skin test or IGRA blood test?	(If yes, document below)	Yes	No

History of BCG vaccination? (If yes, consider IGRA if possible.) Yes____No

1. TB Symptom Check

Does the student have signs or symptoms of active pulmonary tuberculosis disease? Yes _____No

If no, proceed to 2 or 3.

If yes, check below:

Cough (especially if lasting for 3 weeks or	Loss of appetite
longer) with or without sputum production	Unexplained weight loss
Coughing up blood (hemoptysis)	Night sweats
□ Chest pain	Fever

Proceed with additional evaluation to exclude active tuberculosis disease including chest x-ray (PA and lateral) and sputum evaluation as indicated.

2. Interferon Gamma Release Assay (IGRA)

Date Obtained: / / / (specify method) QFT T-Spot other
Result: negative positive indeterminate borderline(T-Spot only)
Date Obtained:// (specify method) QFT T-Spot other
Result: negative positive indeterminate borderline(T-Spot only)

3. Tuberculin Skin Test (TST)

(TST result should be recorded as actual millimeters (mm) of induration, transverse diameter; if no induration, write "0". The TST interpretation should be based on mm of induration as well as risk factors.)**

Date Given:	/ / / M D Y	Date Read:// M D Y
Result:	mm of induration	**Interpretation: positivenegative
Date Given:	// M D Y	Date Read:// M D Y
Result:	mm of induration	**Interpretation: positivenegative

****Interpretation guidelines:**

Equal to or greater than 5 mm is positive:	 Recent close contacts of an individual with infectious TB Persons with fibrotic changes on a prior chest x-ray, consistent with past TB disease Organ transplant recipients and other immunosuppressed persons (including receiving equivalent of >15 mg/d of prednisone for >1 month.) HIV-infected persons
Equal to or greater than 10 mm is positive:	 Foreign born or travelers to the U.S. from high prevalence areas or who resided in one for a significant* amount of time Injection drug users Mycobacteriology laboratory personnel Residents, employees, or volunteers in high-risk congregate settings Persons with medical conditions that increase the risk of progression to TB disease including silicosis, diabetes mellitus, chronic renal failure, certain types of cancer (leukemias and lymphomas, cancers of the head, neck, or lung), gastrectomy or jejunoileal bypass and weight loss of at least 10% below ideal body weight *The significance of the travel exposure should be discussed with a health care provider and evaluated.
Equal to or greater than 15 mm is positive:	• Persons with no known risk factors for TB who, except for certain testing programs required by law or regulation, would otherwise not be tested.

4. Chest x-ray: (Required if IGRA or TST is positive. Note: a single PA view is indicated in the absence of symptoms.)

Date of chest x-ray: ____/ /___ Result: normal____abnormal____

Part III. Considerations for Treatment of LTBI

In deciding whether to recommend treatment of LTBI to individual patients, the clinician should weigh the likelihood of infection, the likelihood of progression to active tuberculosis infection, and the benefit of therapy. Students in the following groups are at increased risk of progression from LTBI to active TB disease and should be prioritized to begin treatment as soon as possible.

- □ Infected with HIV
- □ Recently infected with *M. tuberculosis* (within the past 2 years)
- □ History of untreated or inadequately treated TB disease, including persons with fibrotic changes on chest radiograph consistent with prior TB disease
- Receiving immunosuppressive therapy such as tumor necrosis factor-alpha (TNF) antagonists, systemic corticosteroids equivalent to/greater than 15 mg of prednisone per day, or immunosuppressive drug therapy following organ transplantation
- Diagnosed with silicosis, diabetes mellitus, chronic renal failure, leukemia, or cancer of the head, neck, or lung
- □ Have had a gastrectomy or jejunoileal bypass
- □ Weigh less than 90% of their ideal body weight
- □ Cigarette and e-cigarette smokers and persons who abuse drugs and/or alcohol
- □ Populations defined locally as having an increased incidence of disease due to M. Tuberculosis, including medically underserved, low-income populations.
